

MetaProducts Offline Explorer 6

Web sites at your fingertips!

Save web sites locally to browse offline, preserve content, data mine or create day-to-day archives with Offline Explorer.

Product Description

Offline Explorer is an offline browser capable of downloading entire Web sites, online image galleries, forums, e-books and other types of content. The best ever support for modern Internet technologies, Flash, scripts and active contents allows downloading websites of any complexity. Combine this with flexible filtering and detailed logging to get the universal download tool that serves all your Web spidering and data mining needs. Other benefits include the ability to schedule/sequence downloads, create templates for most typical download tasks, and export sites to autorun CDs and DVDs.

Save Time, Aggravation and Connection Charges

With its ability to download up to 500 files simultaneously, Offline Explorer lets you quickly and easily move Internet data to your hard drive, where you can browse at your leisure much faster than when connected. And you can download during off-peak hours. The files are always available to you, so there's no down time.

Monitor Web Sites

With Offline Explorer's powerful scheduling feature, you can automatically monitor web sites and download changed information. Schedule Manager gives you an easy, visual way to create your schedule using drag-and-drop. Offline Explorer can dial the Internet when necessary, and hang up the connection, exit itself, or shut down the computer once all downloads are complete.

Offline Browser: Be Portable

Offline Explorer lets you take web sites with you when you travel with your laptop computer. When the flight attendants ask everybody to disconnect from the Internet, you still have your web sites on your hard drive. Even if the online content moves or changes, your files are still intact. You can even save streaming audio and video files to your hard disk, and play them back at the highest quality. And Offline Explorer Pro's powerful export feature allows you to share and transfer files, or burn them to CD in normal or Autorun mode. Best of all, the downloaded web sites can be viewed on Windows, Macintosh, and Linux computers.

Project sharing

Many of you know that there are sites that require special attention to setup a Project. Sometimes you spend time adding filters to download exactly what you need. Now you can share the Project on the MetaProducts web site using the Tools | Publish menu and save the time of other users who are trying to download the same site. You will also benefit from the collection of shared Projects, which is available under the same menu.

Update Your Web Site Locally

With Offline Explorer, you can download an entire web site, edit it quickly on your hard drive, and load it back to the Internet.

Main features include:

- Very fast, easy and reliable file retrieval from the Web (HTTP and FTP servers)
- Download up to 500 files simultaneously
- Downloaded web sites may be viewed with your external browser or with our Internal Browser.
- Downloaded Web pages may be printed from the Internal Browser. It is also possible to print the whole site at once.
- Downloaded Web sites may be published on the Web or exported to any other directory
- Fully configurable user interface (including toolbar) with a handy New Project Wizard
- Provides support and extracts links from Java and VB Scripts, Java Classes, Cascading Style Sheets (.CSS), Macromedia Flash (.SWF), XML/XSL/DTD, Table Of Contents (.TOC), MPEG 3 Play List (.M3U), Authorware (.AAM) and Acrobat (.PDF) files
- The only offline browser that fully supports all known XML technologies, including XSL and DTD files
- Multiple Project Templates make new Project creation simple
- Downloaded sites easily exported to another location in required format or added to HTML files or a ZIP archive
- Search through downloaded files for keywords in filenames or in HTML text
- Flexible URL Filters with powerful keyword support to fine tune your downloads
- Downloads can be scheduled, sequenced or started from the command line
- Automatic Export of downloaded Projects

System requirements:

- Windows XP, Windows 2003 , Windows Vista or Windows 7
- 64MB of RAM, or the minimum memory required to run Windows
- 5Mb of available hard-disk space
